PHISHING EMAIL DETECTION & AWARENESS REPORT

Name: Kaushal Deepak Galphade

Internship: Cyber Security (Future Interns)

1. Introduction

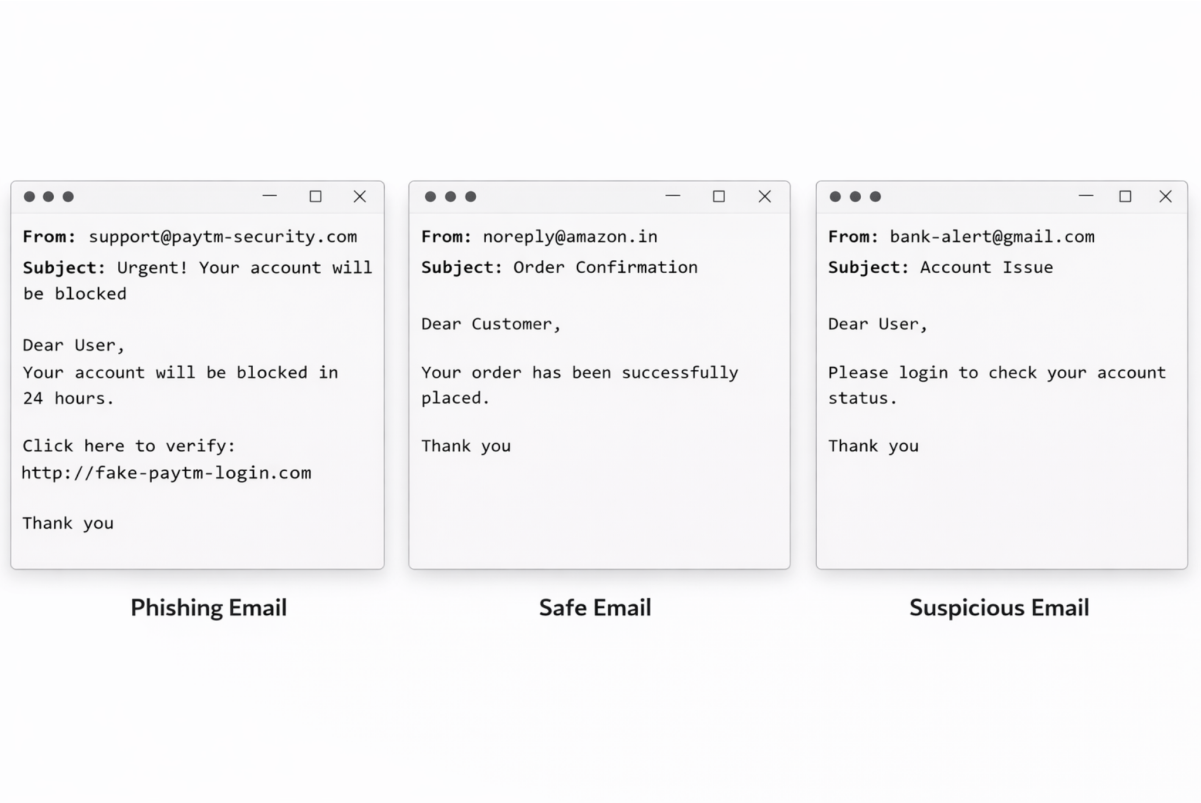
This report analyzes different types of emails to identify phishing attacks and improve awareness.

2. Objective

To classify emails into phishing, safe, and suspicious categories based on their characteristics.

3. Email Analysis

The following screenshots represent phishing, safe, and suspicious emails.



4. Findings

Phishing emails use urgency and fake links. Safe emails come from trusted sources. Suspicious emails have unclear intent and unverified senders.

5. Prevention Tips

Do not click unknown links, verify sender identity, use antivirus, and enable two-factor authentication.

6. Conclusion

Understanding phishing emails helps in preventing cyber attacks and protecting sensitive information.
